

## REZ 2459

### RESISTOR

ESSENTIAL LOAD FOR LED LAMPS TO REMOVE ERROR FAILURE, 24V power supply

### OPIS

Purpose: direction indicator in the 24 V system,  $33\Omega$  resistor corresponds to an additional power of approx. 17.5 W Wire resistor with aluminum heatsink should be connected in parallel to the lamp - between the positive cable of the lamp and the ground wire. The resistor should be screwed to a flat metal surface.
