

REZ 2458

RESISTOR

Essential load for led lamps to remove error failure, 12v power supply

OPIS

Purpose: direction indicator in the 12 V system, 10 Ω resistor corresponds to an additional power of approx. 14.5 W Wire resistor with aluminum heatsink should be connected in parallel to the lamp - between the positive cable of the lamp and the ground wire. The resistor should be screwed to a flat metal surface.
